STATE OF FLORIDA DEPARTMENT OF AGRICULTURE AND CONSUMER SERVICES 1911 S.W. 34th St. / P.O. Box 147100, Gainesville, FL 32614-7100 GENERAL NURSERY STOCK INSPECTION CERTIFICATE Registration Number <u>47233199</u> Section 581.031(21), F.S. TOP TROPICALS LLC 13701 Roanoke St., Davie, FL 33325 This is to certify that this nursery stock has been visually inspected for plant pests and meets at least the minimum requirements of Chapter 581, Florida Statutes.  CHARLES H. BRONSON Commissioner of Agriculture DACS 08011, Revised 11/99 LIVE PLANT – NO DELAY

Planting instructions

All our plants are grown in South Florida, in natural conditions (not in a greenhouse), under full or partial sun, 50 to 90% relative humidity, 55 to 92F with only moderate air movement.

When your plants arrive, unpack the box immediately. After unwrapping the package, immediately pot the plants in containers about **1-3 gal size** (or bigger if you got bigger plant with developed root system). Unwrap the plastic bag carefully, without damaging roots, and set the plants' roots into the soil so that the point where the stem starts stays just at the same level with soil surface. If you place the plant too deep in soil – the stem might rot. Make sure you have a well-drained **potting medium**, with good drainage characteristics which is important for most tropical species. The best choice is soilless potting mix containing 50 to 75% of organic matter (peat moss) with pH rating 5.5 to 6.5.

Water well and let it drain. Mist the foliage with pure water. Remove any yellowed leaves or damaged branches using sharp clippers. Place your plants in a shady spot: in good light, but out of hot direct sun, for a day or two until they re-adjust from shipping stress, then move the pots to their permanent location. Don't water again if the soil is wet.

Check our online Catalog to determine the optimal light and water requirements for the species you have received. Remember, all plants we offer are tropicals and most of them shouldn't be exposed for a long time to low temperatures (below 50-55F).

Allow a week or two before repotting, or planting directly into the ground. If planting outdoors, make sure that low night temperatures won't damage the plant. Do not apply any fertilizer for the first 4 weeks.

Some mature plants are slightly pruned for shipment to avoid damage and reduce burden on root system during stressful period of transportation. Some leaves and flowers might fade or drop during transportation, especially if the package was exposed to extreme heat (it happens sometimes in summer). Usually it won't create any serious problem and your plant will soon recover and new growth will start after 1-2 weeks adjustment period in proper light and watering conditions.

Be careful – do not over water!

Don't water again if the soil is wet. Some plants prefer when soil gets slightly dry before new watering. Refer to our online Catalog for plant's watering needs.

We do our best to make sure your plants have a safe trip. Any serious damage occurred during shipment should be reported within 3 days of your order arrival to receive a free replacement or credit. Shipping costs are not refundable. For more info about our guarantees please refer to our website (order section).

If you have any questions, please feel free to contact us, visit our website and Forum page for more cultivation advice.

Thank you for your business! Good luck with your plants and please come back again!

Sincerely,
Tatiana, Mike & Alex @ www.TopTropicals.com
